

Application

Room air is drawn in from the top of the cabinet through a disposable pre -filter with 85% arrestance, trapping larger particles and prolonging the life of the main filter. Air is forced evenly across the ULPA/H14 filter. The result is a stream of clean laminar air within the work-zone, diluting and flushing contaminants present in the interior. The purified air travels in a horizontal, unidirectional stream towards the open front of the cabinet.

A nominal filter face velocity of 0.45 m/s or 90 fpm ensures that there is a sufficient number of air changes within the enclosed area of the cabinet to maintain the cleanliness.

FEATURES

- MOC: In IS 304 grade SS construction & Outer Chamber made of MS Powder coated
- Direction of Flow Horizontal
- Particle Retention 0.3 Micron & Above
- Noise Level 65 decibel on "A" scale ± 5
- Velocity 90 Feet / Minute ± 20
- Worktable By IS 304 Grade Stainless Steel surface
- Front door by 4 mm thick Polycarbonate
- Manual Sliding Type
- Illumination LED Tube Fittings
- Pressure (ΔP) 0-25mm range differential pressure sensor with digital display
- Gas inlet, Castor Wheels & Power chord

HEPA Filter

- Media: Ultra clean glass fiber paper – imported
- Type: Mini-Pleat HEPA Filter, Separator less
- Retention: 0.3 Micron with a max. 12mm WG
- Efficiency: 99.997%, Grade: H14 rating

POWER SUPPLY

- Power Supply 230V, Single phase, 50 Hz

PRE FILTER

- *Media Synthetic, non-woven polyester fibers*
- *Casing GI with PU coated/ SS frame*
- *Retention 5 Micron & above*
- *Efficiency 95 %*

BLOWER ASSEMBLY

- *Outer rotor type blower system which consists of dynamically & statically balanced aluminum centrifugal impeller driven by a single phase motor Enclosed in an PU coated GI casing directly connected to the filter chamber*

Model	Working Size (WxDxH)
RS-LAF-2	2 x 2 x 2 ft
RS-LAF-4	4 x 2 x 2 ft
RS-LAF-6	6 x 2 x 2 ft
